ECO ARBOR DESIGNS + GOOD HOPE SCHOOL

How Eco Arbor Designs Turned Everyday Business Expenses into a Child's Full School Year

GOOD HOPE SCHOOL

IMPACT SUMMARY

Good Hope School sits on a small piece of family land in rural southwestern Uganda. It was founded in 2007 by a young teacher named Innocent Tumuheki with a simple but powerful vision: give vulnerable children in one of the poorest districts in the country access to education, a safe home, and a future worth believing in.

Today, 140 children are enrolled. Half of them are orphaned or extremely needy, living at the school full or part-time because they have nowhere else to go. Ten teachers and five support staff show up every day to make sure those children are fed, educated, and cared for. The school runs on \$365 per child per year. One dollar a day. That's what it costs to change a life.

Eco Arbor Designs is a company that has always believed business and giving back belong together. They design and supply elevated outdoor flooring systems for rooftops, balconies, and patios across the country, and they already donate 1% of every project to Habitat for Humanity. Giving isn't an afterthought at Eco Arbor. It's part of how they operate.

When Eco Arbor joined PIE and chose Good Hope School as one of their nonprofit partner, a portion of their everyday payment processing expenses began generating something they had never generated before: **a child sponsorship**. The **\$365** PIE generated on Eco Arbor's behalf covers one child's full year at Good Hope School with food, education, housing, safety, and community. All of it, for an entire year, funded by a business expense that was already being paid.

For Eco Arbor, it's simply the right way to do business.
